

Surgery

One of the services that hospitals are best known for is surgery. At Alice Hyde Medical Center, surgeries are done both on an inpatient (meaning a patient will stay overnight in the hospital) and outpatient or same day basis. Increasingly, the majority of surgeries can be done on an outpatient basis—also known as same day or ambulatory surgery. Outpatient surgeries are done as part of the Alice Hyde Medical Center Ambulatory Care Center.

In addition to conventional surgery, AHMC offers laser and laparoscopic surgery services. Surgery is performed in the following areas:

- General Surgery
- Gastroenterology
- Gynecological/Obstetrical
- Ophthalmology
- Orthopedic
- Otolaryngology (ENT)
- Podiatry
- Urology
- Plastic Surgery

All surgeries are performed in one of the four operating suites or in the two-room endoscopy suite located at the Medical Center.

Our Board-Certified surgeons and anesthesiologists and our surgical staff members offer our patients the highest quality of care and the latest in surgical procedures. They also strive to make all phases of surgery—from pre-surgical testing to recovery—as comfortable as possible.
